

**FUNCTION****PURPOSE**

Symbolic name for DATAPLOT's functions file. It is used with the SEARCH and LIST commands.

**DESCRIPTION**

DATAPLOT's functions file contains a list of DATAPLOT functions (grouped by category) with a brief (one line) description. It is a subset of the dictionary file. The dictionary file also includes macro files, program files, and data files.

**SYNTAX**

None

**EXAMPLES**

```
SEARCH FUNCTION CHSCDF
LIST FUNCTION FOR I = 1 1 35
```

**NOTE**

The FUNCTION file is stored in the DATAPLOT directory. It has the name FUNCTION (or function for Unix systems). The exact file name and the directory where it is stored can vary depending on the installation (see your local DATAPLOT implementor to find the exact name on your system).

If DATAPLOT is unable to open the functions file, it is most likely because the directory name is not specified correctly in the local DATAPLOT code. See your local DATAPLOT implementor to have this corrected.

**DEFAULT**

None

**SYNONYMS**

None
