... HINGE PLOT

PURPOSE
Generates a subsample lower or upper hinge versus subsample index plot.

DESCRIPTION
The lower hinge is a pseudo lower quartile and the upper hinge is a pseudo upper quartile. Specifically, a hinge is the median of the points between one of the extreme points (i.e., the minimum point or the maximum point) and the median. The subsample hinge is the hinge of the data in the subsample. The hinge plot is used to answer the question: “Does the subsample spread change over different subsamples?” It consists of:
- Vertical axis = subsample hinge;
- Horizontal axis = subsample index.

In addition, a horizontal line is drawn representing the full sample hinge value. As usual, the appearance of the 2 traces is controlled by the first 2 settings of the LINES, CHARACTERS, SPIKES, BARS, and similar attributes.

SYNTAX
<LOWER/UPPER> HINGE PLOT <y> <x> <SUBSET/EXCEPT/FOR qualification>
where <y> is the response (= dependent) variable;
- <x> is the subsample identifier variable (this variable appears on the horizontal axis);
- LOWER specifies a lower hinge plot and UPPER specifies an upper hinge plot;
and where the <SUBSET/EXCEPT/FOR qualification> is optional.

EXAMPLES
LOWER HINGE PLOT Y X
UPPER HINGE PLOT Y X1

DEFAULT

SYNONYMS
None

RELATED COMMANDS
CHARACTERS = Sets the type for plot characters.
LINES = Sets the type for plot lines.
MEAN PLOT = Generates a mean plot.
SD PLOT = Generates a standard deviation plot.
BOX PLOT = Generates a box plot.
XBAR CHART = Generates a mean control chart.
PLOT = Generates a data or function plot.

APPLICATIONS
Exploratory Data Analysis
