PICTURE POINTS

PURPOSE
This command specifies the number of pixels (horizontal and vertical) on a device.

DESCRIPTION
Normally, specifying the device will automatically set this value correctly. However, this command is useful when using a non-supported model number of a supported device.

SYNTAX 1
PICTURE POINTS <hor> <vert>
where <hor> is a number or parameter that specifies the number of horizontal pixels; and <vert> is a number or parameter that specifies the number of vertical pixels.

This syntax sets the picture points on device 1 (i.e., the terminal).

SYNTAX 2
DEVICE <1/2/3> PICTURE POINTS <hor> <vert>
where 1 specifies device 1, 2 specifies device 2, and 3 specifies device 3; <hor> is a number or parameter that specifies the number of horizontal pixels; and <vert> is a number or parameter that specifies the number of vertical pixels.

This syntax sets the picture points on the specified device (1, 2, or 3).

EXAMPLES
PICTURE POINTS 1000 500
DEVICE 2 PICTURE POINTS 1000 500
