

VERTICALLY**NOTE**

***** THIS KEYWORD IS NOT CURRENTLY OPERATIONAL *****

PURPOSE

Causes traces to be plotted vertically (rather than horizontally) on plots. That is, the point (x,y) is plotted as (y,x).

SYNTAX

None

EXAMPLES

PLOT Y = 3 VERTICALLY FOR X = 0 1 10
PLOT SIN(X) VERTICALLY FOR X = 0 .1 6

NOTE

The DRAWDATA command provides the functionality intended by this keyword. For example, to draw a vertical line from the point (3,0) to the point (3,10), enter the command

DRAWDATA 3 0 3 10

The DRAWDATA command is more flexible than the VERTICALLY keyword since it allows any type of line (horizontal, vertical, or any angle) to be drawn on the plot.

DEFAULT

None

SYNONYMS

None

RELATED COMMANDS

PLOT	=	Generates a data or function plot.
DRAWDATA	=	Draw a line using the units of the most recent plot.

APPLICATIONS

Plotting
