

SYNTAX

PURPOSE

Symbolic name for DATAPLOT's syntax file. It is used with the SEARCH and LIST commands.

DESCRIPTION

DATAPLOT's syntax file contains an example of the syntax for each DATAPLOT command sorted alphabetically.

SYNTAX

None

EXAMPLES

```
SEARCH SYNTAX FIT
LIST SYNTAX FOR I = 1 1 35
```

NOTE

The SYNTAX file is stored in the DATAPLOT directory. It has the name SYNTAX (or syntax for Unix systems). The exact file name and the directory where it is stored can vary depending on the installation (see your local DATAPLOT implementor to find the exact name on your system).

If DATAPLOT is unable to open the syntax file, it is most likely because the directory name is not specified correctly in the local DATAPLOT code. See your local DATAPLOT implementor to have this corrected.

DEFAULT

None

SYNONYMS

None

RELATED COMMANDS

SEARCH	=	Search a file for a string.
LIST	=	Lists the contents of a file.
DIRECTORY	=	Symbolic name for DATAPLOT's directory file.
