NEWS

PURPOSE
Prints out the news, course announcements, new commands, etc. to the general user population.

DESCRIPTION
The NEWS file documents new commands that may not be documented elsewhere. The NEWS command typically only prints a header which gives instructions for printing the entire file (this header should be modified by the local installer to reflect the correct instructions for your site). However, the complete NEWS file contains a historical record of additions. Contact your local site installer for instructions on printing the entire news file.
