

BESSI1E**PURPOSE**

Compute the exponentially scaled modified Bessel function of order 1.

DESCRIPTION

This function can be defined as:

$$\text{BESSI1E}(x) = e^{-|x|} I_1(x) \quad (\text{EQ Aux-30})$$

where $I_1(x)$ is the modified Bessel function of order 1. See the documentation for the BESS11 command for a description of this function.

SYNTAX

LET <y2> = BESS11E(<y1>) <SUBSET/EXCEPT/FOR qualification>
 where <y1> is a number, variable or parameter;
 <y2> is a variable or parameter (depending on what <y1> is) where the computed Bessel value is stored;
 and where the <SUBSET/EXCEPT/FOR qualification> is optional.

EXAMPLES

```
LET X2 = BESS11E(2)
LET A = BESS11E(X)
```

NOTE

DATAPLOT uses the routine BESIE1 from the SLATEC Common Mathematical Library to compute this function. SLATEC is a large set of high quality, portable, public domain Fortran routines for various mathematical capabilities maintained by seven federal laboratories.

RELATED COMMANDS

BESSI0	=	Compute the modified Bessel function of order 0.
BESSI0E	=	Compute the exponentially scaled modified Bessel function of order 0.
BESS11	=	Compute the modified Bessel function of order 1.
BESSIN	=	Compute the modified Bessel function of order N.
BESSINE	=	Compute the exponentially scaled modified Bessel function of order N.
BESSJN	=	Compute the Bessel function of the first kind and order N.
BESSIN	=	Compute the modified Bessel function of order N.
BESSKN	=	Compute the modified Bessel function of the third kind and order N.
