BESSK0E

PURPOSE

Compute the exponentially scaled modified Bessel function of the third kind and order 0.

DESCRIPTION

This function can be defined as:

$$\text{BESSK0E}(x) = e^{-x} \, \text{K}_0(x) \qquad \textbf{(EQ Aux-37)}$$

where K_0 is the modified Bessel function of the third kind. See the documentation for the BESSK0 command for a description of this function.

SYNTAX

LET <y2> = BESSK0E(<y1>) <SUBSET/EXCEPT/FOR qualification>

where <y1> is a positive number, variable or parameter;

<y2> is a variable or a parameter (depending on what <y1> is) where the computed Bessel value is stored;

and where the <SUBSET/EXCEPT/FOR qualification> is optional.

EXAMPLES

LET X2 = BESSK0E(2)

LET Y = BESSK0E(X1)

NOTE

DATAPLOT uses the routine BESK0E from the SLATEC Common Mathematical Library to compute this function. SLATEC is a large set of high quality, portable, public domain Fortran routines for various mathematical capabilities maintained by seven federal laboratories.

RELATED COMMANDS

BESSK0	=	Compute the modified Bessel function of the third kind and order 0.
BESSK1	=	Compute the modified Bessel function of the third kind and order 1.
BESSKN	=	Compute the modified Bessel function of the third kind and order N.
BESSK1E	=	Compute the exponentially scaled modified Bessel function of the third kind and order 1.
BESSKNE	=	Compute the exponentially scaled modified Bessel function of the third kind and order N.
BESSJ0	=	Compute the Bessel function of the first kind and order 0.
BESSI0	=	Compute the modified Bessel function of order 0.
BESSY0	=	Compute the Bessel function of the second kind and order 0.
