CSQRT

PURPOSE
Compute the real or complex component of the square root function for a complex number.

SYNTAX 1
LET <yr> = CSQRT(<xr>,<xc>) <SUBSET/EXCEPT/FOR qualification>
where <xr> is a number, parameter, or variable that specifies the real component of the the complex number;
  <xc> is a number, parameter, or variable that specifies the complex component of the the complex number;
  <yr> is a variable or a parameter (depending on what <xr> and <xc> are) where the real component of the computed square root
  value is stored;
and where the <SUBSET/EXCEPT/FOR qualification> is optional.
This syntax computes the real component of the square root of a complex number.

SYNTAX 2
LET <yc> = CSQRT(<xr>,<xc>) <SUBSET/EXCEPT/FOR qualification>
where <xr> is a number, parameter, or variable that specifies the real component of the the complex number;
  <xc> is a number, parameter, or variable that specifies the complex component of the the complex number;
  <yc> is a variable or a parameter (depending on what <xr> and <xc> are) where the complex component of the computed square root
  value is stored;
and where the <SUBSET/EXCEPT/FOR qualification> is optional.
This syntax computes the complex component of the square root of a complex number.

EXAMPLES
LET AR = CSQRT(14,-2)
LET AC = CSQRTI(14,-2)
LET ZR = CSQRT(XR,XC)
LET ZC = CSQRTI(XR,XC)

NOTE
DATAPLOT uses the Fortran intrinsic function CSQRT to compute this function.

DEFAULT
None

SYNONYMS
None

RELATED COMMANDS
SQRT = Compute the square root of a real number.
CABS = Compute the absolute value of a complex number.
CCOS = Compute the real component of the cosine of a complex number.
CCOSI = Compute the complex component of the cosine of a complex number.
CEXP = Compute the real component of the exponential of a complex number.
CEXPI = Compute the complex component of the exponential of a complex number.
CLOG = Compute the real component of the logarithm of a complex number.
CLOGI = Compute the complex component of the logarithm of a complex number.
CSIN = Compute the real component of the sine of a complex number.
CSINI = Compute the complex component of the sine of a complex number.

APPLICATIONS
Elementary functions
